Vancouver, WA 98666

Attn. Gary Beck, Project Manager:

I am writing in reference to the Klondike III /Biglow Canyon Wind Integration Project. I am excited about the project and the potential for Sherman County. However, I own the only house impacted by the North Alternative.

The 230kV line runs along Herrin Road within 700 feet of my home. This is unacceptable!

The Orion substation located just west of our house is not a viable alternative for us. It is too close and I do not want large power lines crossing over the road near my house. We were led to believe that all power lines would be underground and therefore not a factor. After talking to BPA's engineer yesterday we learned that they are five foot in diameter, overhead lines with a large metal tower 700 foot tower proposed south of our house!

I propose that the line cut northwest through the fields one quarter mile south of our house instead. The North Alternative would still be a viable option, with a more comfortable distance away from the transmission line. Orion could use their other proposed substation location or find another location.

Sincerely,

*Kathryn A. McCullough*
